## Do-it-yourself Instructions

Step 1 **Area preparation**

Ensure that the wall/tile surface is smooth and clean. If covering an existing tile wall, make sure that the tiles are securely attached to the wall.

Step 2 **Measuring**

Take your measurements with precision. Protect the wall panel and place it face down on a clean surface. Report your measurements on the backside of the panel.

Step 3 **Cutting and fitting**

Work on the reverse side of the panel. Cut and fit your panel just like a wooden board.

Step 4 **Dry test and remove the film**

Apply the panel against the wall without using any bonding material to test its positioning. Once satisfied, remove the protection film on the back side of the panel only.

Step 5 **Apply the silicone**

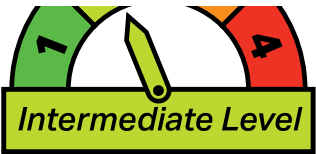

Apply the silicone with the caulking gun in an S-shape pattern.

Step 6 **Panel Installation**

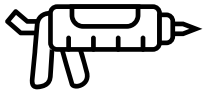

Apply the panel against the wall. Apply silicone between the wall panel and the kitchen bench top or shower recess to avoid any water infiltration. Remove the protection film on the front of the panel in one move to get the best result.

To assist you with the fitting of your splashback, you will receive an easy to read and complete Installation Guide.

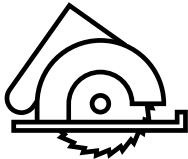

**ANY ELECTRICAL WORK CARRIED OUT DURING THE INSTALLATION OF REFLECTIONS ALUMINIUM COMPOSITE PANELS SHOULD BE DONE BY A LICENSED ELECTRICIAN**

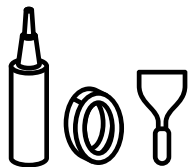

Recommended Installation Material

Silicone Gun

Circular Saw

Silicone, Double-  
sided Tape &  
Spatula
